Personal Website Project

General Description of Project

The use of this personal website was to use as a simple showcase for academic and professional announcements, projects and related research, my general resume, and general introduction of me. The website consisted of only HTML and CSS files, and was designed solely by me. These files are hosted on my GitHub, is deployed via Netlify hosting services.

Planning of the Project

1. Project Outline
   a. Produced list of desired website content (a place to list announcements, a general introduction, etc…) and make pages for each (home, about, resume, portfolio, and contact)
   b. Design page layout and color design
   c. Make weekly plan to produce around one page a day
2. Program and Write HTML/CSS code
   a. Produce each page HTML outline and CSS styles by set weekly deadline
   b. Clean up and comment code to ensure readability for future use
3. Publish Website
   a. Purchase JaydenMerrick.bio as custom domain for the website
   b. Host on Netlify using GitHub Link
   c. Use as a biography website!

Skills Used for the Project

Each skill is separated by columns and rows.

HTML/CSS Web Design

This project was entirely produced with HTML and CSS code using VS Code as my editor. Visit my code via the GitHub link on my portfolio

Netlify Services

Netlify services is a free website hosting server which I utilized to deploy my code stored on my GitHub.
